

LIQUID

ART

the most performing tools by Markus Reugels

Starter Kit

The Starter Kit include the main body with stand, air/color distributor.

It comes with two nozzles.
The spiral and the rotating nozzle.

Main body with rotating nozzle

Nozzles

The nozzles are attached to the main adapter using a bayonet catch.

As the nozzles are less tall than the rotating nozzle, a shorter center tube is included, which fits to all alternative nozzles.

I recommend a working pressure of 2-5 PSI.

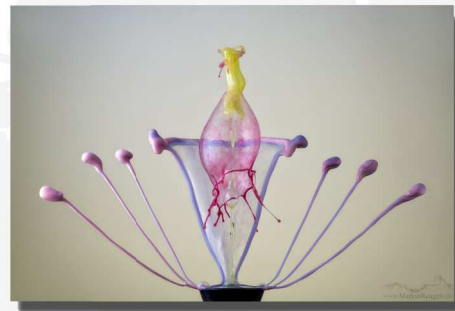

Available Nozzles

You can upgrade the Starter Kit with many parts.
This are my available set of nozzles.
